

Sub B1  
WHAT IS CLAIMED IS:

1. A method for controlling at least one computing element with a universal console (UC), comprising:

storing a user's preferences for the universal console;

5 selecting a computing element to control with the UC;

receiving by the UC a canonical user interface (UI) representation of the computing element's UI;

instantiating a concrete UI by the UC taking into account the stored user preferences;

selecting at least one action-command to be carried out by the computing element;

10 transmitting to the computing element said data associated with said at least one action-command using a remote procedure call mechanism.

2. A method according to claim 1, wherein said selecting at least one action-command includes requesting information about the state of said at least one computing element.

15 3. A method according to claim 1, further comprising interacting with at least one group hierarchy to obtain data in connection with said selected at least one action-command to be carried out by the computing element.

20 4. A method according to claim 1, wherein said storing includes storing data indicating at least one disability of the user.

5. A method according to claim 1, further including carrying out said action-command by said computing element.

25 6. A method according to claim 1, further including receiving by the UC notifications from the computing element.

MSFT-0302/167451.1

7. A method according to claim 6, wherein said notifications include at least one of an error message, warning message, status update message and state change.

8. A method according to claim 1, wherein said canonical UI representation is formatted according to an XML stream.

9. A method according to claim 1, further including requesting a list of available devices that may be controlled by UC.

10. A method according to claim 1, wherein communications between said UC and said computing element are made via Hypertext Transfer Protocol (HTTP).

11. A method according to claim 1, wherein said computing element is one from the group of a computing device and an application.

12. A method according to claim 1, wherein said remote procedure call mechanism makes calls according to SOAP (Simple Object Activation Protocol).

13. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter for choosing one element  $a$  from a set  $A$ .

14. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter for selecting a subset  $A'$  from a set  $A$ .

15. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter for selecting one from the group of True/False, Off/On, OK/Cancel and Yes/No.

MSFT-0302/167451.1

16. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter for selecting an integer  $n$  in the range  $n_1$  through  $n_2$ , with increment  $\delta$ .

5 17. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter for selecting a real number  $x$  in the range  $x_1$  through  $x_2$ , with increment  $\delta$ .

18. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter type for an arbitrary string  $s$ .

19. A method according to claim 18, wherein said arbitrary string  $s$  is to be selected from a suggestion set of strings  $S$ .

20. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter type for the modification of a given first string  $s$ , resulting in a second string  $s'$ .

21. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter type for ordering the elements of set  $A$  into  $A'$ .

22. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a parameter type for pairing set  $A$  elements with set  $B$  elements.

23. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a group construct that contains at least one of commands and subgroups.

24. A method according to claim 1, wherein said canonical UI representation includes a representation associated with a command construct that specifies at least one action to send to the controlled element that will carry out the action-command.

5 25. A method according to claim 24, wherein said canonical UI representation includes a description of the parameters associated with the at least one action.

B1  
10 26. A computer readable medium bearing computer executable instructions for carrying out the method of claim 1.

27. A modulated data signal carrying computer executable instructions for use in implementing the method of claim 1.

5 28. A data structure formatted according to extensible markup language (XML) including data representative of a canonical UI description of a device to be controlled for use by a universal console.

29. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter for choosing one element  $a$  from a set  $A$ .

30. A data structure according to claim 29, wherein said canonical UI description includes a representation associated with a parameter for selecting a subset  $A'$  from a set  $A$ .

25 31. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter for selecting one from the group of True/False, Off/On, OK/Cancel and Yes/No.

MSFT-0302/167451.1

32. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter for selecting an integer  $n$  in the range  $n_1$  through  $n_2$ , with increment  $\delta$ .

5 33. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter for selecting a real number  $x$  in the range  $x_1$  through  $x_2$ , with increment  $\delta$ .

34. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter type for an arbitrary string  $s$ .

10 35. A data structure according to claim 34, wherein said arbitrary string  $s$  is to be selected from a suggestion set of strings  $S$ .

5 36. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter type for the modification of a given first string  $s$ , resulting in a second string  $s'$ .

37. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter type for ordering the elements of set  $A$  into  $A'$ .

38. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a parameter type for pairing set  $A$  elements with set  $B$  elements.

25 39. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a group construct that contains at least one of commands and subgroups.

40. A data structure according to claim 28, wherein said canonical UI description includes a representation associated with a command construct that specifies at least one action to send to the controlled element that will carry out the action-command.

41. A data structure according to claim 40, wherein said canonical UI description includes a description of the parameters associated with the at least one action.

42. A computer system wherein a user controls at least one computing element, said system comprising:

at least one computing element each having a canonical user interface (UI) description associated therewith; and

a universal console (UC) for controlling said at least one computing element and storing user preferences therein;

wherein a computing element of said at least one computing element communicates its associated canonical UI to said UC,

wherein said UC generates a concrete UI description from said canonical UI and said stored user preferences, and

wherein a user thereafter utilizes said UC to control said computing element via said concrete UI by selecting at least one action-command.

43. A computer system according to claim 42, wherein said selecting at least one action-command includes requesting information about the state of said at least one computing element.

44. A computer system according to claim 42, wherein a user of said UC interacts with at least one group hierarchy to obtain data in connection with said selected at least one action-command to be carried out by the computing element.

MSFT-0302/167451.1

45. A computer system according to claim 42, wherein said storage of user preferences includes the storage of data indicating at least one disability of the user.

46. A computer system according to claim 42, wherein said at least one computing element carries out said at least one action-command.

47. A computer system according to claim 42, wherein said UC receives notifications from the at least one computing element.

48. A computer system according to claim 47, wherein said notifications include at least one of an error message, warning message, status update message and state change.

49. A computer system according to claim 42, wherein said canonical UI description is formatted according to an XML stream.

50. A computer system according to claim 42, wherein said selecting at least one action-command includes requesting a list of available devices that may be controlled by UC.

51. A computer system according to claim 42, wherein communications between said UC and said computing element are made via Hypertext Transfer Protocol (HTTP).

52. A computer system according to claim 42, wherein said computing element is one from the group of a computing device and an application.

53. A computer system according to claim 42, wherein said remote procedure call mechanism makes calls according to SOAP (Simple Object Activation Protocol).

54. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter for choosing one element  $a$  from a set  $A$ .

55. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter for selecting a subset  $A'$  from a set  $A$ .

5 56. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter for selecting one from the group of True/False, Off/On, OK/Cancel and Yes/No.

B1  
10 57. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter for selecting an integer  $n$  in the range  $n_1$  through  $n_2$ , with increment  $\delta$ .

15 58. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter for selecting a real number  $x$  in the range  $x_1$  through  $x_2$ , with increment  $\delta$ .

59. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter type for an arbitrary string  $s$ .

20 60. A computer system according to claim 59, wherein said arbitrary string  $s$  is to be selected from a suggestion set of strings  $S$ .

25 61. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter type for the modification of a given first string  $s$ , resulting in a second string  $s'$ .

62. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter type for ordering the elements of set  $A$  into  $A'$ .

MSFT-0302/167451.1

63. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a parameter type for pairing set *A* elements with set *B* elements.

5 64. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a group construct that contains at least one of commands and subgroups.

10 65. A computer system according to claim 42, wherein said canonical UI description includes a description associated with a command construct that specifies at least one action to send to the controlled element that will carry out the action-command.

66. A computer system according to claim 65, wherein said canonical UI description includes a description of the parameters associated with the at least one action.
